

TOXICOLOGY 2

Study program	Veterinary Medicine
Year of study	IV
Semester	VIII
Regime of discipline	DOB
Category of discipline	Dsf
Number of lectures hours per week	2
Number of seminar/laboratory/project hours per week	2
Total number of hours according to the curriculum: lectures/seminars/laboratory/project	28/28
Number of transferable credits	4

SPECIFIC SKILLS

Professional Competence	<ol style="list-style-type: none"> 1. The examination, diagnosis, prevention and treatment of poisonings that affect animals (with reference to knowledge accumulation of toxins kinetics in the body - ways of penetration, absorption, diffusion, metabolism, action, elimination, which will permit to understand the aggressiveness of toxic substances and the reasons for "adjusted" therapeutic intervention; diagnosis of poisoning in animals, fighting against poison with maximum speed and efficiency and prevention of it). 2. Production approval, marketing and consumption of food, quality control and safety of animal and non-animal food products (refer strictly to slaughter of the poisoned animals and commissioning consumption of animal products from poisoned animals). 3. Preparation, conservation, supply and marketing of veterinary medicinal products, diagnostic kits and biocides (used in pharmacology notions of proper and responsible prescribing medicinal products to animals; the principles of pharmacology in prescribing and administering the most appropriate remedy with individualization of treatment cases / groups of animals). <p>Assurance of expertise and management in protection, welfare, husbandry, care, feeding, breeding and livestock production, and in the environmental protection (with regard to quality and safety fodder).</p>
--------------------------------	---

LEARNING OUTCOMES

Knowledge	Definition of the concepts of toxic substance, toxicity, dose-response. Understanding the pathways of penetration, absorption, distribution, metabolism and elimination of toxicants from the body. Mechanisms of toxic action at the molecular, cellular and organ levels (neurotoxicity, hepatotoxicity, etc.). Knowledge of the main classes of toxicants (drugs, pesticides, heavy metals, solvents, industrial substances). General aspects regarding the diagnosis and treatment of poisonings, as well as the role of toxicological expertise.
Skills	Ability to analyze toxicological data, interpret laboratory results and correlate the clinical picture with the suspected toxicant. Risk assessment in case of exposure to xenobiotics (drugs, environment, industry). Use of basic physical and chemical methods for the identification of toxic substances in biological samples. Application of first aid measures and treatment principles (antidotes).
Responsibility and autonomy	Ability to work in a toxicology laboratory, respecting safety regulations. Searching and using toxicological databases for information. Transmitting specialized information on toxicological risks to the public or specialists.

COURSE OBJECTIVES

General objective of the course	Special Toxicology: Learning the basics of morbid states generated by main groups of toxic and toxins (source/ circumstances of poisoning, toxicity, symptoms, pathological picture, diagnosis, differential diagnosis, treatment, animal protection measures and food safety).
Specific objectives	Recognize, diagnosis and treatment of major animal poisoning; Establishing the main consumer protection measures in the case of necessary slaughtered animals after different poisoning.

COURSE CONTENT

LECTURES	Number of hours
Poisoning with industrial pollutants (acids, bases, detergents, fluoride, lead, copper, zinc, molybdenum, selenium, mercury, arsenic, cadmium, sulfates, sulfites, compounds of hydrogen cyanide, phenols, waste from the oil industry and mineral oils).	10
Poisoning with spontaneous and cultivated plants (circumstances, prophylaxis, plants containing alkaloids, glycosides: cyanogenic glycosides, Tio glycosides, cardiotoxic glycosides, saponins, glycoalkaloids; toxalbumins, essential oils and resins, sexually active compounds, oxalic substances, antivitamin).	4
Poisoning with secondary industrial products (from: mills, oil industry, sugar, beer, gluten and starch extraction, alcohol, chocolate factories).	4
Poisoning with feed additives (salt, urea, antibiotics used as growth stimulators, chemical growth stimulants, mineral premixes, feed flours).	4
Toxicosis caused by animal toxins	1
Poisoning with chemical fertilizers (nitrogenous, phosphatic, potassic, miscellaneous fertilizers)	2
Yathropathic poisonings	3

.....

SEMINAR/LABORATORY	Number of hours
Topic no. 1 General measures to combat nonspecific poisoning. The general and specific antidotes.	2
Topic no. 2 Poisonings with plants from spontaneous flora	6
Topic no. 3 Poisonings with chemical fertilizers	4
Topic no. 4 Feed additives poisonings	2
Topic no. 5 Industrial pollutants poisonings	14

ASSESSMENT

Activity type	Assessment criteria	Assessment methods	Percentage of final grade
Lectures	Communication of information using scientific language correctly, specialty circulated within the discipline / scientific field concerned; Knowledge of basic concepts and explain their discipline interdependencies between them;	Exam - written assessment, multiple choices (30 questions) – 15 correct answers for the promotion	60
Seminar/laboratory/clinical sessions	Application acquisitions providing examples in conducting analyzes in solving exercises and problems, supporting arguments;	written assessment - a ticket with different subjects	40
Other activities
